Experience

04/2023 - Present | UI Engineer

Cisco Systems

- Implementing and executing pixel-perfect, high-fidelity, functional Angular-based prototypes of CX/PX Cloud given Figma designs; maintaining 3-4 week turnaround from receiving design to robust implementation; updating all front-end code as well as back-end data files to maintain prototype functionality and usability with mock data; prototypes are presented to thousands of partners and customers during Cisco Live event; created and merged in over 100 PRs for the code repository within 1st year on project; assisting with PR review.
- Implementing over 10 new tours and shoutouts using a 3rd-party API while working within the limitations of the tool; was able to implement Figma designs in the tool to pixel-perfection despite limitations in font options and fine-tuned positioning; assessing user feedback and surveys to fine-tune the user experience of production-level products.
- Leading Miro board Kanban organization for project tasks for prototype alignment, storybook components, Cisco Live projects, etc.
- Collaborating with a multi-faceted team to perfect the user experience for clients; implementing usability features, conducting heuristic evaluations, and synthesizing needs into one comprehensive product; incorporating design and user-experience principles into development.

02/2022 - Present | UX Engineer

Freelance

- Implementing pixel-perfect designs given Figma designs and existing codebase — implemented two live features; currently developing usability improvements and refactoring code.
- Using Angular and Google Firebase in a Git environment to efficiently track progress and work.
- Utilizing UX design principles, color theory, and accessibility design to inform web implementation decisions.

06/2020 - 04/2023 | Visual + Front End Devloper

University of Michigan School of Epidemiology

- Improved existing website structure and documentation as well as web design utilizing HTML/CSS/JS frameworks and libraries; increased engagement with website by 10% and increased map loads to 45,000.
- Created and improved web experiences for learning about the epidemiological consequences of COVID-19; published 2 integral learning modules to website.
- Used R and Flexdashboard to build a COVID-19 modeling dashboard and resource site, use of R language allows for team members with epidemiological experience but without development background to easily add and adjust site content; site published and shared with stakeholders.
- Developed React-based learning modules that utilize SVG warping, timelines, and dynamic programming to create an active and interesting experience; several modules published and shared.

11/2019 - 08/2020 | UI/UX Designer

University of Michigan School of Public Policy

- Researched user needs and behaviors regarding transportation; created 5 different personas and anti-personas to model potential users and stakeholders of transportation equity dashboard.
- Communicated user-centered design choices through wireframes and prototypes to project management; prototype selected as main dashboard design. Design was then developed into a mid-fidelity working prototype to be used to inform web implementation.
- Synthesized the opinions of large, multi-faceted teams into the working deliverable. Advocated for the use of a a shared language to discuss project goals.
- Created project documentation and promotional materials with Adobe Creative Suite tools. Promotional materials used to apply to grants and attend expo.
- Lead affinity wall workshop sessions to understand user needs and pain points. Affinity wall session allowed team leaders to discuss project goals with each other at a higher level.

Skills & Tools & Proficiencies

Programming: HTML/CSS/JS, Python, R

UI/UX: Figma, Adobe XD, Adobe CC, Heuristics, Persona-building

Language: English, Korean, Japanese

Education

University of Michigan 2020

Master of Science in Information (MSI)

Human-Computer Interaction

University of Michigan 2016

Bachelor of Arts (BA)

English Language and Literature
