Education

University of Michigan May 2020

Master of Science in Information
Concentration in Human-Computer Interaction

University of Michigan May 2016

Bachelor of Arts in English Language and Literature
Minor in Japanese Language

Work Experiences

Visual + Front-End Developer 6.2020 - Present

University of Michigan Department of Epidemiology

- Working in Mapbox Studio to comprehend and display GEOJSON-format Michigan COVID-19 data; increased map loads to 45,000
- Improving existing website HTML structure and documentation as well as web design; engagement with website increased 10%
- Iterating upon and creating web prototypes for learning about the epidemiological consequences of COVID-19; executed 2 integral learning modules to website
- Working with R and Flexdashboard to build a COVID-19 modeling dashboard and resource site, use of R language allows for team members with epidemiological experience but without development background to easily add and adjust site content; site published and shared with stakeholders
- Developing React-based learning modules that utilize SVG warping, timelines, and dynamic programming to create an active and interesting experience; several modules to be published and shared

User Experience Designer 11.2019 - 8.2020

University of Michigan Department of Public Policy

- Researched user needs and behaviors regarding transportation; created 5 different personas and anti-personas to model potential users and stakeholders of transportation equity dashboard
- Communicated user-centered design choices through wireframes and prototypes to project management; prototype selected as main dashboard design
- Synthesized the opinions of large, multi-faceted teams into the working deliverable
- Created documentation and promotional materials with Adobe Creative Suite tools
- Lead affinity wall workshop sessions to understand user needs and pain points

Front-End Dev / User Experience Intern 5.2019 - 5.2020

University of Michigan Transportation Research Institute

- Created wireframes, prototypes, and front-end code, executed a web-based dashboard that reaches users across Michigan
- Developed advanced familiarity with Javascript, HTML, and CSS
- Worked with Python and Flask to support front-end; used templating, logins, and get methods with D3 data visualization
- Collaborated extensively through Github and Gitea

Skills

Programming: **HTML/CSS/JavaScript, Python, React Native / React, NPM,** MySQL, R
UI/UX/Design: **Adobe XD**, Figma, **Adobe CC**: Photoshop, Illustrator, Premiere Rush
Languages: English, Korean, Japanese

Projects

COVID-19 Mapping Dashboard

UI/UX Design, Front-end Development
Skills: ***HTML/CSS/Javascript,*** *Github & Gists, R & RStudio, Markdown, GEOJSON, Mapbox Studio, Data Pipelines, Conda Snakemake, Python*

Updated and streamlined design for COVID-19 Mapping dashboard, increasing readability and engagement with map data visualizations. Embeddable map view was featured in local news article. Updated web design sees a 10% increase in page views.
Created 2 new learning modules with data team including one module that used Mapbox Studio's story scroll feature and another module with a map data visualization that utilized a different set of data about COVID-19. Both modules increase overall site engagement.
Ran data pipelines with Conda Snakemake and created new Python scripts to semi-automate Github Gist-based data updates for website.
Actively developing different features including a focus-context-based Michigan COVID-19 timeline view, static map views, and more.

Transportation Equity Open Knowledge Network

UI/UX Design
Skills: ***Wireframing, Prototyping,*** *User research and Persona development, Scenario planning, Graphic Design, Adobe Premeire Rush, Adobe XD, Slide-decks*

Analyzed and dissected interviews and user insights, and created personas to understand user needs and paint points in the transportation sector.
Synthesized findings into slide decks, graphics, and video content that have been used to pitch the project to potential partners and grants.
Developed a **soft prototype** in Adobe XD, which was then used as the design model for the current website.
Collaborated with and provided insight to the development team, user research teams, the principal investigator, and co-investigators on **reaching feasible project goals and conclusions**.
Delivered a working soft-prototype with accurate web design and user interactions, a public-facing video summarizing project goals, and multiple internal documents to educate new and current project team members on best design practices and user needs analysis methods.

Michigan Opioid Epidemic Web Dashboard

Front-End Development
Skills: ***HTML/CSS/Javascript, Python,*** *Github, Wireframing, Prototyping, User research, Graphic Design*

Created and coded web layouts and front end and conducted UI/UX analysis, for the University of Michigan Transportation Research Institute's Opioid epidemic dashboard.
Developed an interface for internal report generation and developed and refined a dashboard for stakeholders/users.
Created the current user-facing design for the dashboard by learning and using the HTML Bootstrap framework, D3, and Flask. Migrated low-fidelity prototypes created in Adobe XD to working HTML/CSS/Javascript . Worked with team to support user logins. Hosted pre-deployment version on PythonAnywhere.
Refined existing assets and data structures. Created new assets when needed.
Pinpointed user needs by utilized previously conducted user interviews. Final design implements key features requested by users.
